

Automatically segment a drawing with AI

Posted on July 30, 2026 by Smaheine

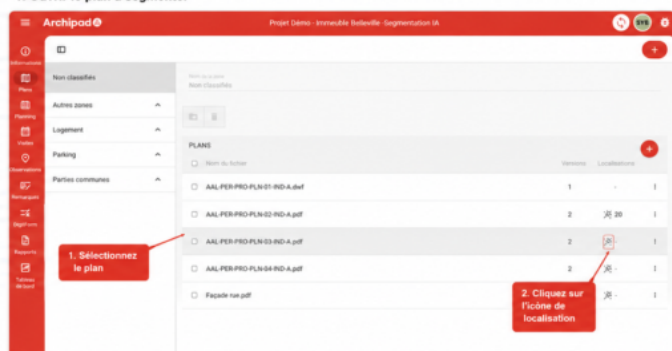

AI segmentation automatically analyzes your drawing to identify different rooms. Once the analysis is complete, Archipad displays the number of rooms detected.

Available on:  Archipad Web

Segment a drawing

1. Open the drawing to analyze.
2. Click **Discover**.
3. Wait while the drawing is being analyzed.
4. Review the detected rooms.
5. Click **Accept** to keep the segmentation.

1. Ouvrir le plan à segmenter

2. Lancer la segmentation

3. Vérifier les pièces détectées

Once the analysis is complete, the recognized rooms appear as colored zones on the drawing.

Things to know

AI segmentation automatically detects most rooms. If some are not recognized, you can rename them manually.
