Use the Gantt View in Planning

Posted on November 12, 2026 by Smaheine

The **Gantt** view lets you visualize Planning tasks on a timeline.

It helps you quickly understand how tasks connect, their duration, and the Dependencies between different project stages.

Access the Gantt chart

1. Open your Project.
2. Click on **Planning** in the sidebar menu.
3. Open the **Gantt** tab.

Tasks created in the **Task** tab appear automatically in this view.

Read the Gantt chart

In the Gantt chart, you can visualize:

- Tasks as bars;
- Milestones;
- Task duration;
- Dependencies between tasks;
- How different project Phases connect.

Element positioning helps you quickly spot overlaps, work periods, and potential delays.

View the impact of a change

Changes made in Planning are reflected in the Gantt chart.

You can use it to verify:

- task delays;
- the impact of a Disruption;

- Milestone shifts;
- how Dependencies affect downstream tasks.
