Use the Planning in Archipad Web

Posted on November 12, 2026 by Smaheine

The **Planning** module in Archipad Web allows you to organize the different stages of a project, visualize their sequence, and adjust the schedule based on events encountered on site.

The Planning created from Archipad Web is also **accessible in Archipad App**, allowing teams to view Planning information directly from the mobile application.

To access Planning on Archipad Web, open your Project and click on **Planning** in the side menu.

The three Planning tabs

Planning is organized around three tabs:

Tab	What it is used for
Tasks	Create and organize Tasks, Task summaries, and milestones
Gantt	Visualize Tasks, their duration, and their Dependencies over time
Disruptions and Exceptions	Declare non-working periods or exceptionally worked days

Dates are calculated taking into account **working days**.

Depending on the elements added to the Planning, Archipad can also automatically recalculate certain dates.

What would you like to do?

Consult the article corresponding to your need:

- **Create and organize Planning Tasks**
- **Create Dependencies between Tasks**

- **Use the Gantt view**
- **Add a Disruption to the Planning**
- **Add an exceptional working day**
- **Understand date calculation and recalculation**
- **Frequently asked questions about Planning**
