

Why is my project not available on my tablet (Archipad iOS)?

Posted on June 30, 2026 by Smaheine

To import a project created from the Web into the iOS application:

- In the application, tap **“Check if new projects are available in the Cloud”**.
- Select the project in question, then tap **“Import from the Cloud”**.

If you don't see the project:

- Check that you are logged in with your Archipad account in the application.
- The project may already be present in **“Already downloaded projects”** under an old name. In this case, synchronize it to get the latest version of this project.
